

# Stopflex<sup>+</sup>

## Hose Retention Safety System

The only fully validated hydraulic hose retention safety system.

## HYDRAULIC HOSE FAILURE RISKS

Hydraulic hose failures are more than just costly – they’re dangerous. Operating at high pressures, hydraulic hose failures can result in violent hose whipping, putting those in the vicinity at risk of serious injury.

Designers of hydraulic systems must ensure hydraulic hoses are installed safely, including evaluation of the suitability of hose retention systems designed to restrain hoses in the event of a failure. Also, it is vital to ensure the retention system is designed and validated to meet the force requirements of the specific application.

## THE STOPFLEX™ PRESSURE (PSI) RATED RETENTION SYSTEM

Unlike other hose retention systems, Stopflex is pressure-rated to handle specific PSI levels, providing verified performance criteria that can be matched to the PSI levels of the particular hose application. This ensures the system is adequate for the demands of the particular hose application, and effectively eliminates hose failure risks by providing a tested and validated system that ensures safety and reliability.

*Note: this is simply done by ensuring the listed pressure rating (PSI) of the Stopflex components is greater than that of the hose application.*

## THE GLOBAL STANDARD FOR HYDRAULIC SAFETY

ISO 4413, Hydraulic Fluid Power - General Rules & Safety Requirements for Systems and Their Components, is a widely accepted international safety standard, establishing guidelines for the design, assembly and maintenance of hydraulic systems, in order to minimize risks of failure, and the potential for user injury.

In particular, ISO 4413, clause 5.4.6.5, Protection Against Hose Failure, requires hydraulic hoses be secured or restrained to prevent whipping in the event of a failure, and that hose restraints must be effective in preventing dangerous movement to protect personnel and equipment. Many companies, especially those in the mining, manufacturing and construction industries, require compliance with ISO 4413.

However, many retention systems fail to meet the intent of ISO 4413 because they’re not pressure rated. Unlike these systems, Stopflex is rigorously tested and validated to withstand real hydraulic system pressures, making it one of the only retention solutions fully aligned with ISO 4413’s safety mandates.

Don't compromise on hydraulic safety. Choose the retention system that's tested and proven to SAE J517 standards to protect your team, safeguard your equipment, and maintain operational integrity.

Because we continually examine ways to improve our products, we reserve the right to alter specifications or discontinue products without prior notice.

## SAFE & EFFECTIVE FORCE CONTAINMENT

Hydraulic hoses contain enormous potential energy while in operation, resulting from their high operating pressures, which are often in the thousands of PSI. During a hose failure this energy becomes kinetic, transforming the hose into a dangerous whip hazard, potentially resulting in serious injury. The Stopflex system is designed to safely dissipate this pressure, and protect those in the vicinity from being struck during a hose failure.

## HOW IT WORKS

### 1 INITIAL DISENGAGEMENT

The system is designed not to interfere during the initial stage of hose failure, allowing for full hose disengagement from the fitting. At this stage, the Stopflex system has not become fully functional.

### 2 PRESSURE RELEASE

As the hose disengages from the coupling, the pressurized media rapidly exits the hydraulic hose, releasing kinetic energy, and causing the hose to whip violently. This sudden movement can be extremely hazardous to nearby personnel and equipment.

### 3 HOSE RESTRAINT

However, as the hose begins to move away from the fitting, the system goes to work. Securely attached to the hose with its specially designed clamps, the clamp plate then digs into the hose rubber preventing the clamp from moving while the steel cable tensions. The overall action restricts the hose from whipping dangerously. Additionally, the steel plate at the opposite end of the steel cable is designed to deform, absorbing the force of the hose's movement and bringing it to a controlled stop. By effectively containing the dangerous whipping motion of a high-pressure hydraulic hose failure, Stopflex enhances workplace safety and reduces the risk of injury or damage.

By effectively containing the dangerous whipping motion of a high-pressure hydraulic hose failure, Stopflex enhances workplace safety and reduces the risk of injury or damage.

Because we continually examine ways to improve our products, we reserve the right to alter specifications or discontinue products without prior notice.

# Stopflex<sup>+</sup>

Safety Retention Systems for High Pressure Hydraulic Hose Assemblies

## + USE FLEXIBILITY

Stopflex components can be applied to many kinds of flexible hose assembly applications. A band, equipped with a rubber gasket, remains perfectly secured to the hose while allowing the hose to swell according to the working pressure. The retaining components can be secured to nipples, SAE flanges or other system components as per the application requirement.

## + SAFETY GUARANTEE

The energy contained within a high-pressured hose, if disconnected from the fitting, can be very dangerous to anyone or anything in the vicinity. The Stopflex retention system was designed to arrest the trajectory of the flexible hose, preventing the energy contained inside the hose from triggering a dangerous “whip effect”. Thanks to the Stopflex system, the hose is safely secured by means of a cable protecting both operators and components.

## + TESTED PROTECTION

The Stopflex system, when installed properly, is manufactured and tested to ensure the retention of the hose up to the maximum pressure indicated in this catalog, in compliance with the following standards regulating the manufacturing of hydraulic flexible hoses:

EN 853	EN 854	EN 855
EN 856	EN 857	SAE J517

### ISO 4413 HYDRAULIC FLUID POWER, GENERAL RULES RELATING TO SYSTEM:

*“Should the rupture of a hose assembly represent a whiplash hazard, the latter shall be restrained or shielded”.*

*“The International Hydraulic Safety Authority is the world leader in hydraulic safety training. Our hydraulic safety content as it relates to systems, occupational and environmental safety is the most comprehensive training available in this subject matter. In regards to hose restraints IHSA high recommends the use of the Stopflex system. In some jurisdictions hose whip restraints are required by law where there is risk to personnel from whipping hoses.”*

### NOT SUITABLE FOR HIGH PRESSURE AIR AND COMPRESSED GAS HOSES N.B.

On the market there are hydraulic flexible hoses capable of exceeding the pressures indicated in this catalogue. In case you encounter such hoses, please contact the manufacturer for proper application guidance, and please refrain from using Stopflex for such applications without the proper manufacturer guidance.

Because we continually examine ways to improve our products, we reserve the right to alter specifications or discontinue products without prior notice.

# Stopflex<sup>+</sup>

Safety Retention Systems for High Pressure Hydraulic Hose Assemblies

## + BASICS OF USE

The assembly procedure of the application is fundamental to ensure the correct operation of the Stopflex system. Failure to carefully follow the assembly instructions can jeopardize the operation of the system. After numerous tests on manufacturer test benches, the ideal combination of materials and assembly procedures has been determined to ensure proper system operation. Proper Stopflex Items, item sizes, and correct applications and assembly all play an integral part in safe use of these products.

- + Given environmental conditions such as ultraviolet light, ozone, salt water, chemical agents (solvents, fuels, oils, greases, volatile chemical compounds, acids, disinfectants and other aggressive elements) early deterioration of the band seal can occur.
- + The seal must be replaced every 4 years if the band is not assembled;
- + The seal must be replaced every 2 years if the band is assembled;
- + The STOPFLEX system must never be re-used in case of rupture, slip-off or replacement of the hose as this will jeopardize the initial safety features of the system. Should the system be re-used, the assembler will be held entirely liable.
- + Please refer to all manufacturer published installation, safety, and user manual documentation when using this product. Please refer to Kuriyama of America Terms & Conditions and to manufacturer Terms & Conditions.

Because we continually examine ways to improve our products, we reserve the right to alter specifications or discontinue products without prior notice.

# Cautionary Statement

All Products sold and distributed by Kuriyama of America, Inc. are in the nature of commodities and they are sold by published specifications and not for particular purposes, uses or applications. Purchaser shall first determine their suitability for the intended purposes, uses or applications and shall either conduct its own engineering studies or tests, or retain qualified engineers, consultants or testing laboratories and consult with them before determining the proper use, suitability or propriety of the merchandise or Products for the intended purposes, uses or applications.

Kuriyama of America, Inc. ("Seller") does not recommend the Products for any particular purpose, use or application, and the Purchaser or user thereof shall assume full responsibility for the suitability, propriety, use and application of the Products. Purchaser shall follow all instructions contained in Seller's catalogs, brochures, technical bulletins and other documents regarding the Products. The Products, including but not limited to, hose, tubing or couplings, may fail due to the use or conveyance of substances at elevated or lowered temperatures or at excessive pressure, the conveyance of abrasive, injurious, flammable, explosive or damaging substances.

Hose or tubing used in bent configurations will be subjected to increased abrasion. Hose clamps or couplings may loosen after initial installation and all sections of hose and tubing including connections, couplings, clamps, conductivity and bonding should be inspected frequently, regularly and consistently, and should be replaced, adjusted or re-tightened for the avoidance of leakage, for the prevention of injuries or damages, and for general safety purposes. Except as indicated in its Limited Warranty, Seller shall not be liable or responsible for direct or indirect injuries or damages caused by or attributed to the failure or malfunction of any Products sold or distributed by it.

Purchasers or users of the Products should frequently and consistently undertake inspections and protective measures with respect to the use and application of Products, which should include the examination of tube and cover, conditions of the hose or tubing, and the identification, repair or replacement of sections showing cracking, blistering, separations, internal and external abrasions, leaking or slipped couplings or connections and make proper proof tests.

## Limited Warranty

The Products sold or distributed by Seller are warranted to its customers to be free from defects in material and workmanship at the time of shipment by us, subject to the following provisions. ALL WARRANTY CLAIMS SHALL BE MADE WITHIN SIX (6) MONTHS AFTER SELLER SHIPPED THE PRODUCTS. SELLER'S LIABILITY HEREUNDER IS LIMITED AT SELLER'S EXCLUSIVE DISCRETION, TO 1) THE PURCHASE PRICE OF ANY PRODUCTS PROVING DEFECTIVE; 2) REPAIR OF ANY DEFECTIVE PRODUCT OR PART THEREOF; OR 3) REPLACEMENT OF ANY DEFECTIVE PRODUCT OR PART UPON ITS AUTHORIZED RETURN TO SELLER.

THIS WARRANTY IS IN LIEU OF AND EXCLUDES ALL OTHER WARRANTIES, EXPRESSED, IMPLIED, STATUTORY, OR OTHERWISE CREATED UNDER APPLICABLE LAW INCLUDING, BUT NOT LIMITED TO, THE WARRANTY OF MERCHANTABILITY AND THE WARRANTY OF FITNESS FOR A PARTICULAR PURPOSE. IN NO EVENT SHALL SELLER OR THE MANUFACTURER OF THE PRODUCT BE LIABLE FOR SPECIAL, INCIDENTAL, OR CONSEQUENTIAL DAMAGES, INCLUDING LOSS OF PROFITS, WHETHER OR NOT CAUSED BY OR RESULTING FROM THE NEGLIGENCE OF SELLER AND/OR THE MANUFACTURER OF THE PRODUCT, UNLESS SPECIFICALLY PROVIDED HEREIN. IN ADDITION, THIS WARRANTY SHALL NOT APPLY TO ANY PRODUCTS OR PORTIONS THEREOF WHICH HAVE BEEN SUBJECT TO ABUSE, MISUSE, IMPROPER INSTALLATION, MAINTENANCE, OR OPERATION, ELECTRICAL FAILURE OR ABNORMAL CONDITIONS, AND TO PRODUCTS WHICH HAVE BEEN TAMPERED WITH, ALTERED, MODIFIED, REPAIRED, REWORKED BY ANYONE NOT APPROVED BY SELLER, OR USED IN ANY MANNER INCONSISTENT WITH THE PROVISIONS OF THE "CAUTIONARY STATEMENT" ABOVE OR ANY INSTRUCTIONS OR SPECIFICATIONS PROVIDED WITH OR FOR THE PRODUCT. 05/03/21 REV
